Why Do We Need To Restore
Mother Mary's Shrine?

Broken tiles of the structure

SMC RESTORATION PROJECT

Decorative items made from polystyrene damaged due to birds and weather. Broken pieces will be changed to ceramic.

SMC RESTORATION PROJECT

Cracked base of
Mother Mary's Shrine

SMC RESTORATION PROJECT

The gutter is too small for good water flow, especially with recent heavy rains. The gap at the edge of the roof is too small. Contractors had to open the roof for thorough investigation before commencing repair works. Most likely, problems are due to wear and tear of the gutter.

SMC RESTORATION PROJECT

Trimming of the Trees in the Church Compound

SMC RESTORATION PROJECT

The trees have grown taller than the buildings. It is best to trim them now to avoid any damage due to the heavy rain and strong winds these days.

Let us continue to pray for the smooth restoration of “SMC Our Home”
